Paris Rain is 16.4$\frac{7}{12}$ Lines, and the *Barometrical Range* 2$\frac{1}{12}$ Lines more than the *Padua*.

The laſt Thing which the illuſtrious *Marquiſs* takes notice of is the *Magnetical Declination*, which he ſaith is 13 Degrees *Weſt*, and hath decreaſed in the ſix Years $\frac{10}{60}$ths; that every Day there is a ſmall Alteration in the Declination, ſo that it doth not continue the ſame a whole Day together; that the Declination of all needles (eſpecially if touched by different Magnets) is different a few Sexageſms. But theſe Niceties I recommend to the Enquiry of the Curious, becauſe they diſagree with the Obſervations of *Gilbert*, and moſt of the Magnetical Writers.

FINIS.
